                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1943, Application US/09938842A

Sequence 1943, Paplication US/09938842A

Patent No. US20020160378A1

GENERAL INFORMATION:

APPLICANT: Harper, Jeff
APPLICANT: Kreps, Joel
APPLICANT: Wang, Xun
APPLICANT: Zhu, Tong
APPLICANT: Zhu, Tong
TITLE OF INVENTION: STRESS-REGULATED GENES OF PLANTS, TRANSGENIC PLANTS CONTAINING
TITLE OF INVENTION: SAME, AND METHODS OF USE
FILE REFERENCE: SCRIP1300-3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TYPE: DNA
 535
                                                                475
                                                                                                                                                                                              358

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution

Also disclosed in the invention of are methods for utilising uridine kinase polypeptides and polynucleotides in diagnostic assays. The polynucleotides and polypeptides of the clavention may be used as diagnostic reagents by detecting mutations in an associated gene. An array of oligonucleotide probes comprising the constructed to conduct efficient screening of genetic mutations, for example. Detection of abnormally decreased or increased levels of polypeptide or mRNA expression may also be used for diagnosing or determining susceptibility of a subject to a disease of the invention. Compression studies and tissue expression studies. The polypeptides of the invention or fragments thereof may be used as immunogens to produce antibodies. These antibodies may be used as immunogens to produce cantibodies. These antibodies may be used as immunogens to produce the invention can be used as a vaccine or in gene therapy to treat confidence of the invention can be used as a vaccine or in gene therapy to treat immunological disorders. This polynucleotide sequence represents the DNA confidence of the invention kinase of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel human uridine kinase polypeptides useful for treating cancers, and to identify agonists and antagonists of the polypeptide useful f treating conditions associated with uridine kinase imbalance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ю

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Tang

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cc 57658 and polynucleotides encoding such proteins. 57658 DNAs and proteins care useful for developing diagnostic and therapeutic agents for 57658-cc mediated or related disorders such as haematopoietic neoplastic disorders (e.g. leukaemia), haematopoietic disorders (e.g. psoriasis, dermatitis, consceptorosis), heart (e.g. sarcoma, myocardial infarction), blood vessels (e.g. hypertension, atherosalerosis) and neurons (e.g. Huntington's conscension atherosalerosis) and neurons (e.g. Huntington's conscension atherosalerosis) and neurons (e.g. Huntington's conscitution as a therosalerosis) and neurons (e.g. Huntington's conscitution as a the conscitution as conscitution as conscitution as conscitution as conscitution and monitoring clinical trials and pharmacogenomics). They are useful as reagents for diagnosing and treating 57658-mediated conscitution as individual from a minute biological sample (tissue typing) cond to aid in forensic identification of the biological sample. The present sequence is a DNA encoding human 57658 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated human uridine kinase treating hematopoietic neoplastic heart and blood vessels -

The invention relates to human nucleic acids (AAI57798-AAI61369) the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides a

polynucleotides are useful

A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as peripheral nervous injuries, peripheral nervous and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, hamostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2152

```
CC sequence and an oligonucleotide comprising a sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC oligonucleotide comprises at least 15 nucleotides, and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primers set can be used in antisense therapy and CC in gene therapy. The primers are useful for synthesising polynucleotides, creation and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAH33633 to AAH18742 represent human cDNA sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification CC of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-off primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a tleast 15 nucleotide; or the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      29-JUL-1999; 99JP-0248036.

```

The invention relates to novel genes (ABL89449-ABL90853) and proteins CC (ABB89040-ABB90444) useful for preventing, treating or ameliorating CC medical conditions e.g. by protein or gene therapy. The genes are consisted from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful CC in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast cand ovarian cancer and other cancers of the adrenal gland, bone, bone CC marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative CC colitis; (c) cardiovascular disorders such as myocardial ischaemias; (CC di) wound healing, (e) neurological diseases e.g. cerebral anoxia and CC epilepsy; and (f) infectious diseases such as viral, bacterial, fungal CC not garasitic infections.

CC Note: The sequence data for this patent did not form part of the correct printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences.

of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary to a polynucleotide which comprises a 5'-end comprises a 1'-end sequence, where the oligonucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH3363 to AAH18742 represent human cDNA sequences; AAB92446 to AAH3633 to AAH18742 represent human cDNA sequences; and AAH3629 to AAH3632 represent human amino acid sequences; and AAH3629 to AAH3632
                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          rrimer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ota T,

                                                                                                                                 CC agonist or antagonist, or genetic construct modding an HTFS protein are useful for treating a disease or condition associated cowith decreased or increased expression of functional HTFS. Disorders cowith decreased or increased expression of functional HTFS. Disorders cowith may be treated using such compositions include cell proliferative disorders and immune disorders. For example, diseases which may be treated include atherosclerosis, hepatitis, psoriasis, cancers (including treats, bladder, bone marrow, brain and uterus cancer), inflammation, and S. AlDS, Addison's disease, allergies, asthma, anaemia, cirrhosis, Crohn's cdisease, atopic dermatitis, diabetes mellitus, multiple sclerosis, crohn's cdisease, atopic dermatitis, systemic lupus erythematosus, crohn's cdisease, atopic dermatitis, systemic lupus erythematosus, crohn's cdisease, atopic dermatitis, systemic lupus erythematosus, cromplications of cancer, haemodialysis, extracorporeal circulation, cromplications of cancer, haemodialysis, extracorporeal circulation, cromplications of cancer, haemodialysis, extracorporeal circulation, cromplications of comcer, bromplication probes useful in mapping the naturally coccurring genomic sequences. HTFS, proteins are useful for creating cromplication are useful for screening libraries of compounds in a variety of drug screening techniques. Antibodies which specifically bind HTFS may be used for the diagnosis of disorders associated with the expression of CC used for the diagnosis of disorders associated with HTFS may be used to treated or inhibitors of HTFS. The present sequence corporates or inhibitors of HTFS. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         HTFS-1 to HTFS-42, and sequences AAH23801-AAH23842 represent cDNAs encoding them. The proteins play important roles in the regulation of cellular signalling and proliferation. The HTFS proteins are useful for screening compounds for their effectiveness as agonists or antagonists of transferase activity, or for compounds that specifically bind to an HTFS protein or which modulates the activity of an HTFS protein. Pharmaceutical compositions comprising an HTFS protein, HTFS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequences

                                                                                                                                                                    US-09-896-522-2
                                                                                                          Percent Similarity:
                                                                                  Local Similarity: y Match:
                                                                                                                                                                                                                     immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as system enuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinjinhbin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       21-JAN-2000;

                                                                                                                                                                                                                                                                                                                        The present invention relates to the isolation of novel human molecules for disease detection and treatment (MDDT), and the polynucleotide sequences (mddt) encoding them. The MDDT polypeptides may be used to screen for molecules that bind to, or are bound by the encoded polypeptides, and to develop a transcript image of a tissue or cell type. Probes comprising at least 20 nucleotides of the mddt polynucleotide may be used to assess the toxicity of a test compound. The MDDT polypeptides and mddt polynucleotides are useful in the diagnosis, study, prevention and treatment of diseases associated with the expression of molecules for disease detection and treatment. Such disorders include cell proliferative disorders (e.g. arteriosclerosis, cirrhosis, or cancers), and autoimmune/inflammatory disorders (e.g. asthma, Crohn's disease, or multiple sclerosis). The mddt collynucleotides may also be used as molecule markers, in microarrays, and in somatic or germline gene therapy. ABS51779-ABS51814 encode
